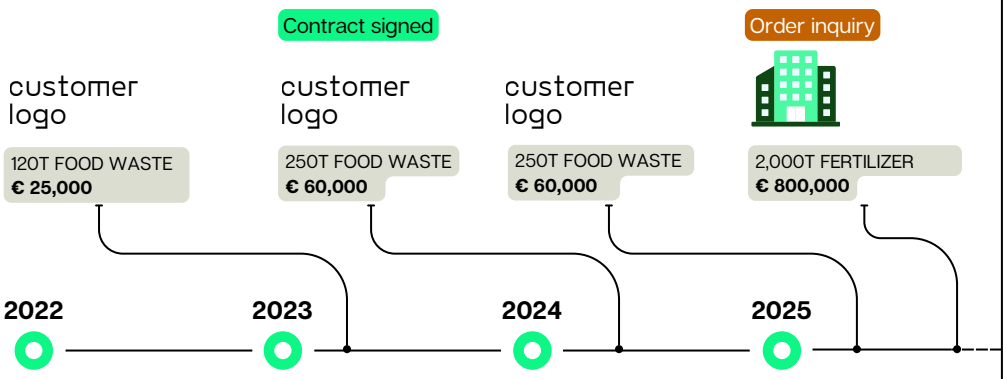
Overview

bnfldt is a fully circular company, registered as an organic waste management and recycling facility. We convert high-quality food and slaughterhouse waste into both liquid and pelletized fertilizers –distributed to wholesalers and used on our own fields for sustainable crop production. As the only company in Zealand with full-cycle approvals, we've developed an innovative method for turning animal by-products into pelletized fertilizers. Our unique setup enables us to complete the entire recycling and production process within a single day, offering true same-day fulfilment.

Traction

Cashflow positive by the end of 2025

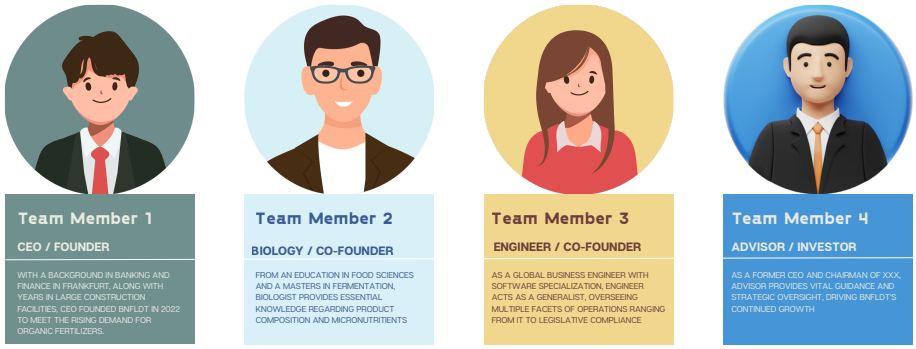


Products

- **Waste management**
- **Fertilizer production**
- **Crop sales**

Fertilizer and waste management services are highly scalable and form the commercial backbone of our business. Crop production plays a supporting role, closing the loop, adding brand value, and demonstrating the effectiveness of our fertilizers in action.

Team



The core team consists of Founder / CEO, Investor / Advisor, Fermentation Specialist, and IT & Production Operations with respective backgrounds within finance and construction, food science, and engineering.

Competitive advantage(s)

bnfldt is the **sole producer** of pelletized ABP CAT 3 fertilizers on Zealand - and one of a few in Denmark

Our very unique cocktail of certifications enables us to obtain:

- **Same day** waste to pellets
- **Strong** customer relations
- **Closed loop** business model
- **Marginal** logistics costs

Business model

bnfldt's circular business model turns organic waste into next-generation, all-natural fertilizer–the centerpiece of our operation. This fertilizer is sold to external partners and used internally for sustainable crop production. With revenue streams across waste management, fertilizer sales, and fresh produce, our model ensures full-cycle value creation and scalable impact.

TAM €4.28B by 2032

EU and Danish climate targets are fueling a fast-growing €4.28B market for organic fertilizers. With a scalable, closed-loop model, ReGaia is uniquely positioned to meet this demand.
